

# The Tank Journal

Your Source for the REAL facts when it comes to storage tanks

**It's A Fact - Painted Tanks do not HAVE to be repainted, BUT...**

Epoxy painted tank coatings can be Rolled, Brushed, Sprayed, Robotically applied, electrostatically applied, baked... it doesn't matter. **Paint is Paint.** Cover it with liquid, cover it with powder, even cover it with plastic wrap.... Painted tanks will eventually need to be recoated – **It's A Fact !** And all recoats are not the same - Field applied under field conditions with a variety of field results. (**Caution:** Also be sure to confirm that your tank has enough corrosion allowance so it actually CAN be sandblasted and painted when the time comes – Not all are and paint can't fix holes !)
