

# The Tank Journal

Your Source for the REAL facts when it comes to storage tanks

It's time to "raise" your game in elevated water storage !

With hundreds of Aquastore composite elevated tanks (CET) already installed, glass-fused-to-steel technology offers the lowest ownership cost of any elevated water storage tank. Periodically, painted steel elevated tanks must be taken out of service to sand blast and repaint - A VERY costly and lengthy procedure. However, Aquastore CET's projects never need to be painted because the tank is GLASS and not paint. Lower initial cost, faster construction, lower maintenance, and longer life. Let one of our regional sales managers take you to tour an Aquastore CET project and see the advantages for yourself !
