# AQUASTORE TANKS & DOMES

**QUALITY** Aquastore glass-fused-to-steel tanks are fabricated in an ISO 9000 certified facility using the highest quality materials and the latest coating technologies. Our advanced glass coating is factory applied and thermally cured at 1500 deg F to give both a chemical and physical bond. Fabrication includes the proprietary edgecoating process which flames stainless steel alloy to the edges prior to glassing for added protection and quality. The glass coating means Aquastore provides exceptional corrosion resistant characteristics against liquid and vapor, and offer excellent impact and abrasion resistance.

**LOW LIFE CYCLE COST** The initial cost of a tank is not the complete cost! Aquastore tanks have a lower life cycle cost than other tanks. The glass-fused-to-steel coating NEVER needs recoating or costly and environmentally troublesome sandblasting. Graffiti is more easily removed from a glass coating than any other form of coating. Aquastore has one of the lowest maintenance requirements of any tank. Over the life cycle of the tank, Aquastore is not only the best option but has the lowest life cycle cost.

**MINIMAL MAINTENANCE** The glass-fused-steel coating is the renowned as the coating system that needs minimal maintenance and NEVER needs recoating. With the benefit of over 50 years of experience in porcelain enamel technology, the Aquastore Tank provides you with the best option for longevity and ease of ownership.

**SPEED OF ERECTION** With in-house engineering, exceptional ISO certified fabrication facilities, modular construction, and dedicated dealer construction crews, Aquastore can meet the tightest deadlines—deadlines that would be unobtainable using other types of storage systems. With no field welding or painting needed, weather has only limited effect on the construction timetable. Discuss your deadlines with your independent authorized dealer and be prepared to be pleasantly surprised.

**TURNKEY INSTALLATION** Your independent authorized Aquastore dealer has full details on all Aquastore tanks and product lines. Your dealer can provide assistance with sales, submittals and drawings, installation and post sales service—the full turnkey option.

**EXPANDABLE** Aquastore can be designed with expansion in mind. Designed for tomorrow's requirements and built for today's needs, the Aquastore can be expanded quickly and efficiently when that extra capacity is critical. This expansion can be completed at significantly less cost than a new tank to meet that future capacity need. The expansion capability is NOT possible with other types of storage tanks.
